

ALAKERE JENUS

Backend / Full-Stack Software Engineer

Java | Spring Boot | Fintech | Microservices

biz.jenus@gmail.com | +234 815 786 8666 | github.com/jjenus | <https://jjenus.github.io>

PROFESSIONAL SUMMARY

With 5+ years of experience, I specialize in the Java/Spring Boot ecosystem with a focus on high-integrity systems. I bridge the gap between raw device data and financial transactions, ensuring that when hardware moves or money changes hands, the system is reliable, idempotent, and observable.

TECHNICAL SKILLS

Languages	Java (Primary), JavaScript / TypeScript, PHP, SQL, Bash
Frameworks	Spring Boot, Spring Security, Spring MVC, Hibernate / JPA, Node.js, Express.js, Vue.js / Nuxt
Backend	RESTful API Design, Microservices, Event-driven Systems, WebSockets, JWT, MQTT
Messaging	ActiveMQ, MQTT brokers, uplink/downlink device protocol handling (GT06, Autoseeker)
Payment	Paystack (transactions, transfers, webhooks, reconciliation), idempotency patterns, payout retry pipelines
Databases	PostgreSQL (JSONB, arrays, partial indexes), MySQL, MongoDB
DevOps	Docker, GitHub Actions (CI/CD), Linux / Bash, Maven, Postman, Git
Testing	JUnit, Mockito, Testcontainers, Spring Security Test, integration testing
Observability	Micrometer, Prometheus, Caffeine caching, structured logging (MDC correlation IDs)
Practices	TDD, Agile / Scrum, API versioning, OpenAPI / Swagger, RFC 7807 ProblemDetail

WORK EXPERIENCE

Backend / Backend Engineer | **BeyondSystems Ltd** Mar 2024 - Jun 2025 | Lagos

- Architected and maintained RESTful backend services in Java and Spring Boot supporting IoT device management and real-time telemetry dashboards for enterprise clients.
- Designed data ingestion pipelines processing high-volume sensor payloads from MQTT brokers; reduced end-to-end data latency by 35% through optimised message-queue handling and batch persistence strategies.
- Built secure, versioned APIs with Spring Security and JWT authentication, consumed by mobile and web frontend clients across multiple tenants.
- Integrated CI/CD pipelines using GitHub Actions and Docker, cutting deployment cycle time by 25% and standardising release packaging.
- Collaborated with embedded/hardware teams on firmware-to-cloud integration, bridging microcontroller communication protocols (I2C/SPI/UART) to backend data models.

Backend Software Engineer | **Datanucleus Inc.** Mar 2023 - Feb 2024 | Ibadan

- Co-developed the backend of Falcon, a multi-tenant fleet tracking SaaS, building the core data processing layer in Java and Spring Boot with MySQL.
- Implemented uplink/downlink message processing for multiple GPS device protocols including GT06 and Autoseeker via ActiveMQ, handling concurrent streams from large numbers of tracked vehicles in real time.
- Built the application and service API backend consumed by the Falcon web dashboard, covering live vehicle state, trip history, geofencing alerts, and fleet reporting endpoints.

- Contributed backend services to Parrot, a companion monitoring and alerting product, including notification dispatch and device event processing pipelines.
- Optimised MySQL query performance through targeted indexing, query refactoring, and schema tuning to support real-time analytics dashboards used by operations teams.
- Wrote unit and integration tests with JUnit 5 and Mockito, contributing to a reduction in production bug rates across the sprint cycle.
- Participated in Agile ceremonies - sprint planning, daily stand-ups, code reviews, and retrospectives.

Backend Developer | **Wirepick** *Apr 2022 - Feb 2023* | *Ibadan*

- Contributed to backend microservices development in Java and Spring Boot; delivered features reviewed and approved by senior engineers in a structured Agile team.
- Debugged and resolved production backend issues, improving system uptime and stability over the engagement period.
- Deepened applied knowledge of OOP, SOLID principles, and RESTful API design through code reviews and internal engineering workshops.

PROJECTS

Quiika | *Verified Gifting Platform (Live, In Development)* | quiika.com

- Fintech platform built on Spring Boot 3.4, Java 21, PostgreSQL, and Paystack - covering gift creation, checkout, callback verification, and automated bank transfer payout.
- Transaction integrity enforced so payouts only fire on confirmed commits; idempotency keys on every transfer and a reconciliation scheduler for missed webhooks.
- Security: AES-256-GCM encryption for bank account data at rest, HMAC-SHA256 session tokens, replay-protected public tokens, and Bucket4j tiered rate limiting across all sensitive endpoints.
- Observability via Micrometer and Prometheus; structured MDC logging with correlation IDs; role-based admin portal with audit log, manual payout retry, and fee configuration.

Falcon | *Multi-Tenant Fleet Tracking SaaS - Datanucleus Inc.*

- Backend data processing service for GPS device uplink/downlink over ActiveMQ, supporting multiple protocols (GT06, Autoseeker) with concurrent multi-device stream handling and real-time position updates.
- Application API backend for the Falcon dashboard: live vehicle state, trip history, geofencing, and fleet reporting. Built with Java, Spring Boot, and MySQL.

Biometric Fingerprint Identification System | *Final Year Project (First-Class grade)*

- Desktop application built with JavaFX and SQLite3 for real-time fingerprint enrolment and identity verification using a Digital Persona SDK optical sensor. Implemented custom pattern-matching logic and a local biometric database with a clean GUI.

EDUCATION

B.Eng. Electrical & Electronics Engineering 2020 | *Second Class Upper (2:1)*

Niger Delta University, Wilberforce Island, Bayelsa State

Coursework: Digital Electronics, Control Systems, Telecommunications, Embedded Systems, Software Programming

Postgraduate Application - Computer Engineering *(In View)*

University of Port Harcourt, Rivers State

CERTIFICATIONS & TRAINING

- Javascript Data Structures and Algorithms - FreeCodeCamp
- Web Development Fundamentals - Udacity
- Soft Skills Training - Jobberman Nigeria
